

PEN TO PAPER SPACING FOR INKJET PRINTING**Abstract**

In a print system including a host communicating with an inkjet print
5 apparatus, a processor executes an inkjet print driver. The driver manages print job
communication to the inkjet print apparatus. The print job includes print data and at least
one print control parameter. The inkjet print apparatus includes a controller, an inkjet print
source which records the print data onto a media, and a mechanism which adjusts source-to-
media spacing. The controller responds to a first parameter of the at least one print control
10 parameter to control setting of the source-to-media spacing by the adjusting mechanism for
the print job.
